RESEARCH EXPERIENCE

- Research Group of Prof. Victor Junqiu Wei** M.U.S.T.
Research Assistant Mar. 2025 – Present
- **Conversational Text-to-Trajectory Visualization (Text2Traj).**
 - Developed a dialogue-centric visualization system on **PostgreSQL** and **PostGIS**, integrating Text-to-SQL paradigms to process complex spatio-temporal queries.
 - Implemented an **LLM-based semantic reasoning layer** to autonomously detect and resolve query ambiguities (e.g., spatial granularity conflicts, underspecified visualization types) and identify unanswerable requests.
 - Constructed a large-scale benchmark dataset containing adversarial examples to evaluate the robustness of Large Language Models in handling spatial constraints and administrative boundary logic.

- PF-CFD Team (Prof. Junxiang Yang)** M.U.S.T.
Research Assistant Feb. 2024 – Present
- **Multi-Phase-Field Vesicle Simulation**
 - Implemented a hybrid numerical solver for 3D fluid vesicle dynamics in **C++**, integrating phase-field models into an existing simulation framework.
 - Applied a semi-implicit finite difference scheme to evolve phase-field equations, ensuring rigorous numerical stability and energy conservation.
 - Optimized memory management and data storage strategies, significantly reducing computational overhead for multi-vesicle interaction simulations.

• 3D Phase-Field Simulation for Tissue Growth

- Developed a proprietary **C++** simulation framework from the ground up, implementing a novel **Implicit ADI scheme** to overcome the stability bottlenecks of traditional explicit methods.
- Achieved **second-order temporal accuracy**, enabling **high-fidelity** long-term simulations that were previously infeasible.
- Extended the theoretical model from 2D surfaces to **3D volumetric geometries**, enabling precise prediction of tissue evolution in realistic porous structures.
